

Northwind Robotics

Warranty and Support Policy

Effective 1 January 2025. This policy governs all Northwind Robotics hardware products, including the Atlas AR-200 and Orion OR-500. Where a product manual and this policy disagree, this policy takes precedence.

1. Warranty Periods

Northwind warrants each robot chassis against defects in materials and workmanship for the period stated in the product's specification. For the Atlas AR-200 the chassis warranty is two years; for the Orion OR-500 it is three years. Battery packs are warranted separately: one year for the Atlas AR-200 and two years for the Orion OR-500. The warranty period begins on the date of delivery, not the date of first use.

2. What Is Covered

The warranty covers repair or replacement of defective components at Northwind's discretion. Covered items include the drive system, onboard compute, safety scanners, and structural chassis. Labour performed by a Northwind-certified technician is included for the duration of the warranty.

3. What Is Not Covered

The warranty does not cover consumable parts, which wear out through normal use. Consumables include drive wheels, LiDAR sensor windows, and charging contacts. Battery capacity loss within the rated cycle count is considered normal wear and is not covered.

The warranty is void if the robot has been operated outside its rated temperature range, if the safety scanners have been disabled, if unauthorised firmware has been installed, or if a preventive-maintenance service has been carried out by anyone other than a Northwind-certified technician. Damage from liquid ingress beyond the robot's IP rating is also excluded.

4. Making a Claim

To make a warranty claim, contact Northwind support at robotics-support@northwind-example.com or call the support line at +1-555-0100 during business hours. You must provide the robot serial number, a description of the fault, and any error codes displayed. Northwind aims to acknowledge every claim within one business day.

5. Support Tiers

Northwind offers three support tiers. Standard support is included with every robot and provides email support with a response target of one business day. Priority support, sold separately, provides telephone support and a four-hour response target during business hours. Premium support provides 24-hour coverage every day of the year with a two-hour response target and an assigned account engineer.

Support tier is tracked per customer account, not per robot. A customer on the Premium tier receives Premium support for their entire fleet. The support tier for an account can be viewed in the fleet management console under the Account section.

6. Loan Units

Customers on the Priority or Premium support tier are eligible for a loan robot if a warranty repair is expected to take longer than five business days. Loan units are not available on the Standard tier. A loan unit is provided at no cost but the customer is responsible for return shipping.

7. End of Life and Recycling

Northwind provides a take-back programme for robots at the end of their service life. Battery packs must be returned separately from the robot chassis for safe recycling. Do not dispose of a lithium-iron-phosphate battery pack in general waste. Contact support to arrange collection under the take-back programme; there is no charge for this service for robots still under warranty.

8. Policy Review

This policy is reviewed annually by the Northwind customer operations team. The next scheduled review is December 2025. Questions about this policy, as opposed to specific support requests, may be directed to policy@northwind-example.com.
